## Tips for caring of for your jewellery

**AR-Jewellery** is available for these services which are not included in the guarantee :

- It is recommended to perform a thorough cleaning of your jewellery once a year.
- It is recommended to check the setting of precious stones and pearls, especially for jewellery worn frequently. Pearls, worn regularly maintain their brightness and natural light, but perfumes, lacquers, cosmetics or the acidity of the skin can damage their splendor.
- It is advisable to wipe the pearls with a soft cloth or chamois after each use.
- It is advisable to keep the jewellery individually in their boxes, to avoid contact between them, which could damage the surface of metals, stones or pearls.
- In order to enhance the splendor of jewellery made in white gold, these are covered with rhodium. This particular metal coating requires regular and careful maintenance, as it tends to darken naturally.
